

# What's New in NS8 V2.0 for PrestaShop

NS8 is excited to launch V2.0 of our best-selling software for our PrestaShop merchants.

## NS8 Protect - Fraud Prevention Platform Module

Developed by [PrestaShop Partners](#)

**Best seller** ★★★★★ 4 votes

NS8 helps you minimize the impact of fraud on your business without blocking valid customers.

From V1.6.0.4 to V1.7.6.7

Free

What can you expect out of V2.0? Let's jump right in!

## Getting Started with V2

Check out our NS8 v2.0 overview to see our general updates and our v2.0 migration checklist.

## Order Intercept

PrestaShop merchants can now leverage order intercept in NS8. From the **Settings** screen, merchants can scroll to **Order Intercept** and choose their intercept point:

- **Intercept between Payment Capture and Order Fulfillment** - Orders are held for review after payment is captured, and you can choose whether to approve, verify, or cancel the order.
- **Manual Mode** - NS8 scores users and orders but does not interfere with the order processing workflow.

### Choose the order intercept point:

- ☒ **Intercept between Payment Capture and Order Fulfillment**  
After the payment is captured, orders are held for you in order status "NS8 - Merchant Review". When approved in NS8 Protect, orders are updated to "Processing in progress".
- ☐ **Manual Mode**  
NS8 will continue to score users and their orders but will have no impact on the processing of the order.

Want to learn more about what's new on the V2.0 settings screen? Check out the full settings overview [here](#).

## Suspicious Orders and Refunds

The Order Review screen includes a banner to remind merchants that canceled orders are not automatically refunded through NS8.

Order Number:  
**MGUCMXPOE**

Order Time: (24 days ago)  
10:58 AM 07-10-20

Order Total:  
**26.12**

NS8 Order Status:  
**Canceled** ?

NS8 Risk:  
**High** ?

Action:

 Canceled

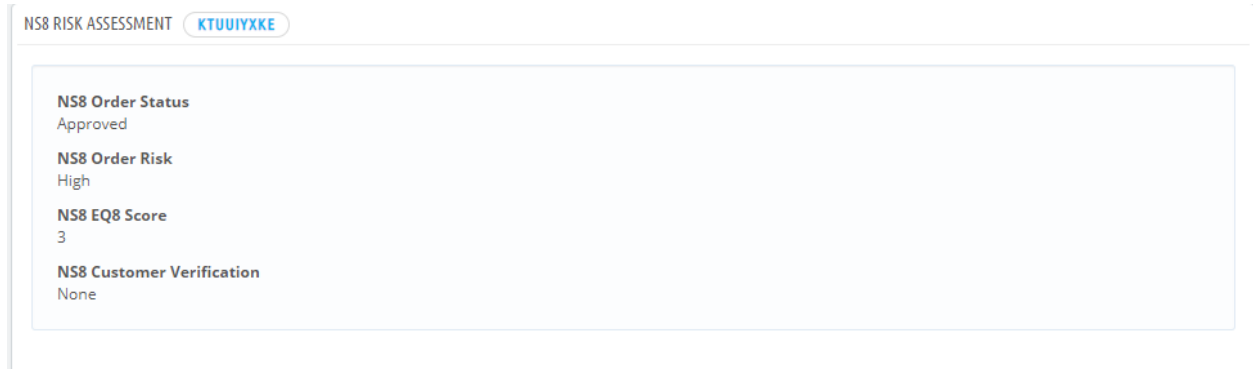

NS8 Protect cannot automatically refund all orders. Please confirm through your ecommerce platform that any desired refund has been processed.

Order Log: ?

Time	Action
00:00:03	Merchant Settings: Updated Risk to Low
00:00:03	Merchant Settings: Added Ekata Assessment
00:00:03	Order Rules: Updated Risk to High by an unn...
24 days	Merchant: Updated Status to Canceled

## NS8 Risk Assessment

The Order screen on the PrestaShop backend now includes an **NS8 Risk Assessment** section, which shows the key insights NS8 provided on the order. Merchants can click the blue order number hyperlink to view the order in NS8.

NS8 RISK ASSESSMENT [KTUUIYXKE](#)

**NS8 Order Status**  
Approved

**NS8 Order Risk**  
High

**NS8 EQ8 Score**  
3

**NS8 Customer Verification**  
None

This section replaces a banner in V1.0 that displayed the EQ8 score and NS8 recommendation.

## Order Statuses

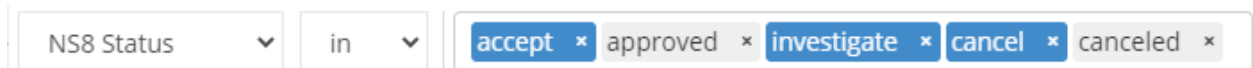

In V2.0, the NS8 order statuses have been refined and simplified to: **approved**, **merchant review**, and **canceled**.

NS8 Order Status ? is in Approved Merchant Review Canceled

NS8 Risk ? is in Medium High Low

In V1.0, the NS8 order statuses included: **accept**, **approved**, **investigate**, **cancel**, and **canceled**.

NS8 Status ? in accept approved investigate cancel canceled

## Navigation History

If friendly URLs are enabled, merchants can see a consumer's navigation history from the Order Review screen. We recommend leaving friendly URLs enabled to ensure you have access to all the consumer data we provide.

**SET UP URLS**

Friendly URL

YES

NO

Accented URL

YES

NO

Redirect to the canonical URL

302 Moved Temporarily (recommended)

Disable Apache's MultiViews option

YES

NO

Disable Apache's mod\_security module

YES

NO

**Save**

If friendly URLs are disabled, the navigation history functions the same way it did in V1.0, and only shows Home.

## View and Enable Friendly URLs

To access friendly URLs, navigate to the **Configure** section in the PrestaShop sidebar navigation. Expand the **Shop Parameters** options and select **Traffic & SEO**. The **SEO & URLs** page opens and displays all the configured URLs for the site, as well as the associated friendly URL.

Scroll down to the **Set up URLs** section. The **Friendly URL** field displays first, and can be toggled to **No** or **Yes**.

For more information on friendly URLs, see PrestaShop's documentation on SEO & URLs Preferences.

## New Look and Feel

V2.0 is a big UI upgrade for our PrestaShop merchants who are accustomed to using V1.0 of NS8. Here are a few snapshots to show just how much has changed:

## Navigation

### V2.0 Navigation Bar

Our navigation menu got a full redesign, and now includes our live chat icon (in V1.0, the chat icon was available at the bottom of the screen).

### V1.0 Navigation Bar

## Settings

### V2.0 Settings

In addition to the new look and feel, we've also added our available extensions (Ekata and Verifi) to the Settings screen.

## Settings

Timezone for Reports

Select the timezone to use when displaying reports.

Choose a timezone

America/Los\_Angeles

Valid vs. Suspicious Sessions Threshold

Select the EQS score that determines whether a session is valid or not. Sessions below this score will be marked as suspicious.

Choose a custom EQS score. The default is 200.

0

200

500

Assign NSR Risk for Orders

Every time a user visits your store, each action they take is scored by the EQS engine to determine their risk for fraud. Negative attributes (such as a user trying to hide their location or identity) will push their score down. Positive attributes (such as natural phone movements) will push their score up.  
NSR Risk is determined by the initial scoring of the EQS engine prior to any Order Rules being checked.  
Select the EQS score that determines whether an order is High, Medium, or Low Risk. Orders within this score range will be assigned an NSR Risk value accordingly on the individual order's review screen.

Choose custom ranges for the EQS Score.

The default high risk is 500, Medium Risk is 20-500, and Low Risk is 1-200.

High Risk 500

Medium Risk 20-500

Low Risk 1-200

Order Intercept

This setting allows NSR Protect to intercept an order between payment authorization and order fulfillment. Once intercepted, the order rules can be applied to determine if an order is approved, canceled, sent for additional analysis, or held for manual review.

Choose the order intercept point:

Intercept between Payment Capture and Order Fulfillment

After the payment is captured, orders are held for you in order status "NSR - Merchant Review". When approved in NSR Protect, orders are updated to "Processing in progress".

Manual Hold

NSR will continue to score users and their orders but will have no impact on the processing of the order.

Order Creation

Payment Capture

Intercept

Order Fulfillment

Scoring Extensions

NSR Extensions can be added to extend scoring functionality to NSR Protect.

Ekato

Run an identity check on customer's orders with Ekato. This lets you instantly know if a name, address, phone number, email, and IP address all belong to the same person. Each lookup costs 10¢ and the cost will empty be added to your monthly bill.  
Choose a custom EQS Score range to determine when a Ekato identity Check will be run automatically on an order. Actions can be applied to orders in this range in [Order Rules](#).

0

200

500

1000

Additional Extensions

Extensions provided by third parties can be added to NSR Protect to extend scoring functionality.

VeriCard

Verify Cardholder Dispute Resolution Network allows store admins to resolve a pending chargeback before it becomes a chargeback on your merchant account. Too many chargebacks can lead to costly fees, fines, and penalties. If a customer initiates a chargeback case, Veri will alert the store admin and provide a window to resolve or dispute the case before it becomes a chargeback.

Customer Verification

Customer Verifications provide an identity verification tool for when you are unsure if you want to approve an order. It works as follows:  
An email is sent from [appsupport@nsr.com](#) to the customer which asks them to verify a recent order and confirm their identity. The customer is presented with two options, confirm or deny the order.  
If they click to confirm the order in the email, they are directed to a page and asked to enter a mobile number to receive a final confirmation code via SMS.  
After receiving the confirmation code via SMS, the customer can then enter the code to verify their recent order.  
If they deny placing the order on the original email, it directs them to a page where they can reject the order and you are notified accordingly.  
If there is no response, no actions are taken and the order will remain in Merchant Review.  
You can also automatically trigger a Customer Verification on orders with [Order Rules](#). Visit our [guide](#) on the [Customer Verification Flow](#) to learn more.

Customer Verification Branding

NSR Protect allows you to customize the subject, body, and header of the emails that are sent to your customers when you request additional verification for an order. Please refer to using HTML tags when writing the subject or body of these emails; only plain text and merge tags are supported.

Merge Tags

Merge tags can be used to insert dynamic content into the subject and body of your verification emails. These merge tags will automatically populate the email with relevant information and allow you to create generic templates that will be tailored for each individual message. Merge tags must be entered exactly as they appear.  
**%%STORE NAME%%**  
This merge tag will insert the name of the store from which an order was placed.  
**%%CUSTOMER NAME%%**  
This merge tag will insert the name or email address of the customer who placed the order.  
**%%FIRST ITEMS%%**  
This merge tag will insert the name of the highest-value item from the order.  
**%%SUPPORT CONTACT%%**  
This merge tag will insert the name, phone number, and email of your designated support contact, as shown:  
John Dough  
[john.dough@domain.com](mailto:john.dough@domain.com)  
+18005551212  
Please fill in the [Verification Support Contact](#) details to use this merge tag. This will be your support contact that will field incoming questions from your customers. If no contact information is provided, this will default to your store name.

Google Analytics Integration

By integrating this app with your Google Analytics account, we will create a filtered remarketing audience that you can use to target your remarketing campaigns from Google Ads.

You are not currently integrated with Google Analytics.

If you wish to change this, you can authorize your Google Analytics account and select a web property.

Authorize an account

Choose a custom EQS score threshold for remarketing. The default is 100.

Valid vs. Suspicious Users

Select the EQ8 score that determines whether a user is valid or not. Users below this score will be marked as suspicious.

Choose a custom EQ8 score. The default is 100.

0

200

1000

☒ Flag Orders in Admin

Set the EQ8 score to flag orders to investigate

The order details page in the admin will show the order's score and status.

Choose a custom EQ8 score. The default is 100.

0

320

1000

☐ SMS Verification for Suspicious Orders

Send an SMS verification request for suspicious orders. These are handled as follows:

- An email is sent to the user with a link to a page with instructions to enter a mobile number to receive an SMS message.
- If the same mobile number is used for a abnormally large number of orders, the order risk will be raised to high.
- Otherwise, if the user confirms the order, the order risk will be removed.
- If the user replies they did not place the order, the order risk will be raised to high.

Email message to send to user (emails are sent from 'approveyourorder.com'):

**Subject:**

Please verify your recent order with %%STORE NAME%%. 321

**Personal Message:**

Your recent purchase at %%STORE NAME%% needs to be verified. Please use the link below and follow the steps to verify your order.

Save

Google Analytics Integration

ACTIVE

By integrating this app with your Google Analytics account, we will create a filtered remarketing audience that you can use to protect your remarketing campaigns from traffic fraud.

In addition, we will create custom elements that allow you to report on your valid vs. suspicious users.

Your currently integrated Google Analytics web property is: UA-91860011-1

If you wish to change this, you can re-authorize your Google Analytics account and select a new web property.

Click here to authorize a different account

Google Analytics Remarketing

Only users above this score will be included in remarketing audiences. This feature requires that you have integrated Google Analytics into this app.

Choose a custom EQ8 score. The default is 100.
